- <https://www.youtube.com/watch?v=X2Vi29Yq3jY>

Ownership

- Can be active or passive
- Strong sensory or sensorimotor correlations
- Requires a certain amount of plausibility

“This thing is a part of me”

Agency

- Requires active control
- Strong sensorimotor correlations
- More flexibility to own non-body parts

“I control this thing”

Applications

Proteus effects

Applications

Rehabilitation – Phantom pain

Applications

- Basic research (my area)
 - How far can we push what is “plausible” for ownership, and/or agency?
 - How much asynchrony can we tolerate?
 - Uncanny valley effects?
 - Individual characteristics?
 - Develop new metrics to measure ownership/agency and proteus effects

https://www.youtube.com/watch?v=pA_BE-L-Y2g

Must-haves

- Separate “ownership” and “agency” levels, and a combined level
- Metrics and data collection in between levels
 - Questionnaire
 - Dangerous obstacle avoidance
 - Aperture test
- **Experimenter mode** (screw with synchrony)
- Customizable avatar characteristics
- Must be FUN!
- Easy GUI for researchers/clinicians to use
